

LUND
UNIVERSITY

**Proceedings of the
14TH NORDIC SEMINAR ON
COMPUTATIONAL MECHANICS
Lund, 19-20 October, 2001**

L. Beldie, O. Dahlblom, A. Olsson,
N. S. Ottosen and G. Sandberg (*editors*)

Name	Title	Page
Keynote lectures		
<u>E. Lund</u> , H. Møller and L.A. Jakobsen	Interdisciplinary Analysis and Design Optimization of Systems with Fluid-Structure Interaction	1
T. Borrvall, <u>A. Klarbring</u> , J. Petersson, B. Torstenfelt and M. Karlsson	Optimization in Solid, Fluids and Bio-Mechanics	5
<u>T. Kvamsdal</u> and H. Melbø	Adaptive FE-Methods in Computational Mechanics Based on Variationally Consistent Postprocessing	9
<u>A. Berezovski</u>	Computational Methods for Moving Phase Boundaries in Solids	-
<u>M. Määttänen</u>	Numerical Simulation of Ice-Induced Vibrations in Offshore Structures	13
Session I-A		
J. Olsson	Resilient Modules in FE-Simulations of Unbound Road Material	29
R. Kouhia and P. Marjamäki	On the Integration of Inelastic Constitutive Models	33
A. K. Olsson and P.-E. Austrell	A Fitting Procedure for Viscoelastic-Elastoplastic Material Model	37
E. Omerspahic	Damage induced Anisotropi in a Hyperelasto-Viscoplastic Model with Mixed Hardening	41
J. Brauns	Computational Model for Composites with Anisotropic Reinforcement	45
K. Ståline and P. J. Gustafsson	Micro Mechanics Modelling of Fibre Composite Materials	49
Session II-A		
M. P. Bendsøe, M. Neves and O. Sigmund	Optimal Topology Design of Microstructures with a Constraint on Local Buckling Behaviour	53
U. Nyman and P.J. Gustafsson	Reliability and Collapse of Layered Shells; Numerical Procedure	57
M. Kaminski	Sensitivity Gradients Computations for the Homogenized Elastic Properties of Fiber-Reinforced Composites	61
F. Ivanauskas, J.Dabulyte and L. Giniunas	The Minimization of Stretches in Diode-Pumped Solid-State Laser	63
J. Lellep and E. Puman	Optimization of Stepped Conical Shells of von Mises Material	67
M. Redhe, T. Jansson and L. Nilsson	Using Surrogate Models and Response Surfaces in Structural Optimization	71

Session I-B

G. Slugocki	Digital Data Processing using the Orthogonal Polynomials and its Applications in Mechanics	75
M. Samofalov and R. Kacianauskas	Application of Semi-analytical FE for Thin-Walled Beams with Distortion	79
J. Stegmann, J.C. Rauhe, L. Rosgaard and E.Lund	Shell Element for Geometrically Non-Linear Analysis of Composite Laminate and Sandwich Structures	83
K. V. Høiseth	Scanning - A New Approach to Numerical Modeling of Structures	87

Session II-B

D. Boffi and L. Gastaldi	On the Q2-P1 Stokes Element	91
P.-O. Marklund and L. Nilsson	Airbag Inflation Simulations Using Coupled Fluid-Structure Analysis	94
F. Ivanauskas and R. Baronas	Reducing of Dimensionality in Modelling of Moisture Diffusion Process in Porous Solid	97
N. H. Sharif and N.-E. Wiberg	On Computation of Unsteady Motion of Two-Fluid Interfaces in Porous Media Flow	101

Session I-C

L. Lu and O. Tullberg	Interactive Finite Element Analysis by Java3D API	105
J. Lindemann, O. Dahlblom and G. Sandberg	CORBA in Distributed Finite Element Applications	109
Y. Luo	An Adaptive Strategy Based on Gradient of Strain Energy Density with Application in Meshless Methods	113
W. Chen	Boundary Knot Method for Laplace and Biharmonic Problems	117
Z. Wieckowski	Stress Recovery Based on Minimization of Complementary Energy	121
M. Ander and A. Samuelsson	On p-Hierarchical Solid Elements for Large Displacement Analysis of Thin Shells	125
G. Piatkowski and L. Ziemianski	Computational Mechanics and Artificial Neural Networks in Damage Detection in Rods	129
A. G. Tibert and S. Pellegrino	Form-Finding of Tensegrity Structures - A Review	133

Session II-C

S. Heyden	Simulation of Shrinkage and Mechanical Properties of Paper	137
F. De Magistris and L. Salmén	Analysis of the Iosipescu Test for Studies of Combined Shear and Compression of Wood	139
E. Serrano and P. J. Gustafsson	Modelling of Adhesive Joints in Timber Engineering	143
P. J. Gustafsson and E. Serrano	Strength Design of Glued-in Rods	145
J. A. Øverli	Heat- and Stress Development in Hardening Concrete	149
A. Ahlström	Simulation of Wind Turbine Dynamics	153
I. Gabrielaitiene, R. Kacianauskas and B. Sunden	Analysis of Heat Losses in Multilayered Structures of a Pipeline Using Finite Element Method	157
J. Eriksson, S. Ormarsson and H. Petersson	Finite Element Simulation of Non-Linear Moisture Flow in Orthotropic Wooden Materials	161

Session I-D

K. Krabbenhoft and L. Damkilde	Coupled Versus Uncoupled Heat and Mass Transfer in Capillary-Porous Materials	165
M. Polanco-Loria, O.S. Hopperstad and T. Børvik	A Concrete Material Model for Impact Loading Conditions	169
K. Ärölä, R. von Herten and M. Jorkama	Contact Mechanical Approach to Determine Elastic Moduli of Paper Rolls	173

Session II-D

N. L. Pedersen and A.K. Nielsen	Truss Optimization with Constraints on Eigenfrequencies, Displacements, Stresses and Buckling	177
S. Pajunen	On Sensitivity Computations of Geometrically and Materially Non-Linear Structural Response	181
L. Wei, P. Mäkeläinen and J. Kesti	Optimum Design of Cold-Formed Steel Z-shape Purlin using Genetic Algorithms	185

Session I-E

L. V. Stepanova	On Geometry of a Totally Damaged Zone Near a Mode III Crack Tip in Creep-Damage Coupled Problem	189
L. Østergaard, J.F. Olesen and H. Stang	Modelling Simultaneous Tensile and Compressive Failure Modes of the Split Cylinder Test	193
B. Skallerud and T. Holmås	Geometric and Material Instabilities in Tensile Loaded Cracked Shells	197
J. Jackiewicz, M. Kuna and M. Scherzer	Non-Local Approach for Damage Simulation in Ductile Materials	200
P. Pedersen	On Crack Tip Stress Releasing	204

Session II-E

W. Siekierski	Identification of Normal forces in Members of Lab Tested Models of Bridge Truss Grids	208
J. Y. Cognard, A. Poulhalec and P. Verpeaux	Parallel Strategies in Structural Linear and Non-Linear Analysis	210
M. M. Frenkel and V. G. Bykov	Dynamics of Multilink Transformable Structures with a Shape Memory Wire Actuator	214
A. Filipovski and C. Pacoste	Formulation of a Flat Three Node Shell Elasto-Plastic Element	218
B. Skallerud, A.K. Mohammed and J. Amdahl	Efficient Collapse Analysis of Stiffened Panels	222

Session I-F

P. A. Wernberg and G. Sandberg	A Symmetric Time-Stepping Scheme for Coupled Problems	226
A. V. Chizhov and K. Takayama	Simulation of a Drop Impact on Cold and Hot Rigid Surfaces	228
R. Barauskas and V. Daniulaitis	Computer Simulation of the Short Wavelength Transient Elastic Vibration in Solids	231
J. Zapomel	Stability Judgement of Periodically Excited Rotors Supported by Short Squeeze Film Dampers Taking into Account Inertia Effects and Rupture of the Oil Film	235
M. Langthjem and N. Olhoff	Modal Expansion of the Perturbation Velocity Potential for a Cantilevered Fluid-Conveying Cylindrical Shell	239
P. Davidsson, G. Sandberg, G. Björkman and J. Svenningstorp	A Virtual Vehicle Laboratory for Computational Simulation and Design	243
T. Ekevid and N.-E. Wiberg	High-Speed induced Ground Vibration - An Application of the Scaled Boundary Finite Element Method	245
